

**Live Access Pricing (Older Cases)**  
**Pricing 1/1/17 – 12/31/18**

MDILog pricing includes five-years of live access, data storage and daily back-up of all case data. After five years, offices must begin paying data storage costs to retain live access to older case data. Older case data is ALWAYS available and backed-up. However, to save on operation costs, older case data (specifically images and documents) are archived “offline” at a fraction of the cost. Offices have the option of continued “live” access to older cases or downloading and archiving older cases locally.

To maintain 24/7/365 live access to cases older than five years the cost is calculated at \$0.20 per gigabyte per month. **Budgeting tip: \$100 per 1000 cases annually.**

**NOTE:** *For customers choosing to remove older cases from MDILog’s data center to store locally: There is a one-time per jurisdiction export set-up fee of \$250.00 plus a \$0.50 per case export fee to move all case data and media offline to a customer supplied storage device (e.g., USB drive). Secure shipping charges (i.e., FedEx) will apply.*
